EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard Kim, Applicant's representative, registration # 48,360, on 09/30/2004.

The application has been amended as follows:

1. (Currently Amended) A document editing apparatus for displaying on a screen a document comprising a content described in plural permeable layers by displaying the permeable layers one on another on the screen, the apparatus comprising:

document synthesis means for displaying the permeable layers that have been set to be displayed on [a] **the** screen based on display/non-display setting included in data of each layer;

document editing means for generating a new permeable layer <u>based on a user</u>

entry of comments among multiple user entries and adding thereof to the document

[comprising] which includes the permeable layers displayed on the screen, and for generating, when the new permeable layer is added, information of the permeable layers displayed on the screen as layer display state information at the time of adding

the new permeable layer, [the new permeable layer being based on a user entry of comments among multiple user entries,] the new permeable layer including deterministic mark information for indicating a temporary layer display state information based on [a] **the** user entry [of a deterministic designation] to the document editing means;

layer state managing means for managing the layer display state information in correlation with the new added permeable layer;

display designation receiving means for receiving a display designation for specifying an arbitrary layer from [a] **the** user; and

layer state reproducing means for controlling the document synthesis means to display the permeable layers [that was] displayed on the screen when the [specified] new permeable layer was added based on the layer display state information at the time of adding the new permeable layer in response to reception of the layer specification from the display designation receiving means, wherein the state of the document, when the specified permeable layer was added, is reproduced.

2. (Previously Presented) The document editing apparatus according to claim 1, wherein

the document editing apparatus comprises a client apparatus and a server apparatus connected to each other by way of a communication line, and wherein

Page 4

Application/Control Number: 09/587,265

Art Unit: 2176

the client apparatus comprises the document synthesis means, the document

editing means, the display designation receiving means, and layer state reproducing

means, and

the server apparatus comprises the layer state managing means and document

managing means for managing data of each permeable layer.

3. (Previously Presented) The document editing apparatus according to claim 2,

wherein

the client apparatus further comprises layer state temporarily storing means for

temporarily storing layer display state information of each of plural permeable layers

added by the document editing means, transmitting the temporarily stored layer display

state information to the layer state managing means when the added plural permeable

layer data pieces are transmitted to the document managing means and reflected on

the document, and controlling the layer state managing means to manage it.

REASONS FOR ALLOWANCE

1. The following is a statement of reasons for the indication of allowable subject matter:

In interpreting the claims in light of the specification and applicant's arguments, the Examiner finds the claimed invention is patentably distinct from the prior art of record.

The prior art of record, Aoyama et al. (Aoyama), U.S. Patent No. 6,493,732, Takakura et al. (Takakura), U.S. Patent No. 5,848,430, and Tabuchi, U.S. Patent No. 5,950,215, teach the invention substantially as claimed.

Aoyama discloses version information including its version name and creation date is stored in storage each time a document is edited, and providing a display method for representing to user a display image in which version information is combined with configuration information (Abstract, col. 2, lines 46-53, col. 4, lines 17-38, col. 8, line 64 – col. 9, line 10 and Fig. 6).

Takakura discloses Takakura et al. disclose a screen control command 6-12 in Fig. 6 designates the manner of the screen display, i.e., layer display, non-layer display (col. 12, line 37 – col. 13, line 28). Takakura et al. also disclose the order of the fixed frame control data tables of the presently edited document page, which tables are developed in the main memory1-5, is changed (edit layer of the document), thus the moved fixed frame is re-displayed (col. 18, lines 49-67).

Application/Control Number: 09/587,265 Page 6

Art Unit: 2176

Tabuchi also disclose when audience newly produces, in a presentation material, a container (layer) in which data is to be embedded, the audience sets context information attendant on the container (layer) and available for everyone's reference, and history information showing version (V1, V2, ..., Vn) are set as context information to a plurality of layers (col. 11, line 39 – col. 12, line 2).

2. Claim 1 is allowed because the prior art of record does not expressly disclose alone or in combination "the new permeable layer displayed based on a user entry of comments among multiple user entries, the new permeable layer including deterministic mark information for indicating a temporary layer display state information based on the user entry to the document editing means"

The dependent claims 2-3 further limit independent claim 1, therefore they are considered allowable for the same reason set forth for claim 1.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Chau Nguyen whose telephone number is (703) 305-

4639. The Examiner's future phone number is (571) 272-4092, which will be effective

sometime in October 2004. The Examiner can normally be reached on Monday-Friday

from 8:00 am to 5:00 pm.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's

supervisor, Joseph Feild, can be reached at (703) 305-9792. Joseph Field's future

phone number is (571) 272-4090, which will be effective sometime in October 2004.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For

more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

have questions on access to the Private PAIR system, contact the Electronic Business

Center (EBC) at 866-217-9197 (toll-free).
